

New Studies Identify Significant Energy Savings Potential

in New York's Affordable Multifamily Housing and Highlight Best Practices for Achieving Savings

A new study, "Potential for Energy Savings in Affordable Multifamily Housing," documents the potential energy savings and non-energy benefits from the implementation of energy efficiency measures in New York's affordable multifamily housing. The study identifies the maximum achievable potential savings and benefits that can be captured over the 20-year period 2015–2034 through the deployment of affordable multifamily energy efficiency programs.

THE STUDY DETERMINED THAT BY 2035, NEW YORK COULD COST-EFFECTIVELY:

A companion report, "Program Design Guide: Energy Efficiency Programs in Multifamily Affordable Housing," highlights best practices in implementing efficiency programs that can be used to effectively reach New York's affordable multifamily housing. The recommended best practices, based on research on efficiency programs for multifamily affordable housing (MFAH) nationwide, include the following:

- 1 Support** a "one-stop-shop" where building owners can gain access to integrated program services.
- 2 Establish** a goal to capture all cost-effective efficiency in MFAH.
- 3 Assure** coordination and count savings across electricity, gas, and water utility programs.
- 4 Structure** incentives for whole-building savings.

21% | PERCENTAGE OF NEW YORK HOUSING STOCK THAT IS AFFORDABLE MULTIFAMILY

1.7 MILLION | UNITS OF AFFORDABLE MULTIFAMILY HOUSING IN NEW YORK

Benefits of Increased Energy Efficiency in Multifamily Buildings

Making affordable multifamily housing more energy efficient is a cost-effective way to reduce energy consumption, preserve housing affordability, reduce pollution, and create healthier and more comfortable living environments. Currently, more than 1.7 million New York households live in affordable multifamily buildings and these units represent 21 percent of the state's housing stock.

NEW YORK FAMILIES

Reduces the burden of energy bills for low-income New York residents.

Creates healthier, more comfortable living environments that can reduce instances of illnesses like asthma, which can be a major cause of missed work and school.

Reduces the high energy demand that drives up energy prices, thereby helping to contain energy costs for all New York residents.

NEW YORK COMMUNITIES

Reduces operating and maintenance costs for owners of affordable multifamily properties, freeing up capital for preserving New York's affordable housing stock.

Improves local economies by creating clean energy jobs and enables residents to redirect spending to other non-energy necessities.

NEW YORK UTILITIES

Helps utilities reduce energy demand and meet their clean energy goals

Reduces bill-payment issues and related costs to utilities by lowering the energy bills of low-income customers.

Enables utilities to provide better, more reliable services by reducing stress on the grid, especially in energy-constrained areas.

ABOUT THE ENERGY EFFICIENCY FOR ALL PROJECT

The mission of the Energy Efficiency for All (EEFA) project is to bring together the energy and housing sectors to tap the benefits of energy efficiency for millions of Americans living on limited incomes. We work with a range of partners in 12 states to promote effective utility energy efficiency programs for affordable building owners and healthy and affordable housing for residents. We blend expertise in affordable housing, energy efficiency, building ownership, and utility engagement. We work to support local groups by providing tools and resources that can help them increase energy efficiency opportunities for underserved tenants in their states. Local partners include Association for Energy Affordability, Center for Working Families, Green & Healthy Homes Initiative, PACE Energy and Climate Center, and We Act for Environmental Justice.

This project was made possible with funding from The JPB Foundation.
