

# New Studies Identify Significant Energy Savings Potential

in Pennsylvania's Affordable Multifamily Housing and Highlight Best Practices for Achieving Savings

A new study, "Potential for Energy Savings in Affordable Multifamily Housing," documents the potential energy savings and non-energy benefits from the implementation of energy efficiency measures in Pennsylvania's affordable multifamily housing. The study identifies the maximum achievable potential savings and benefits that can be captured over the 20-year period 2015-2034 through the deployment of affordable multifamily energy efficiency programs.

**THE STUDY DETERMINED THAT BY 2035, PENNSYLVANIA COULD COST-EFFECTIVELY:**

A companion report, "Program Design Guide: Energy Efficiency Programs in Multifamily Affordable Housing," highlights best practices in implementing efficiency programs that can be used to effectively reach Pennsylvania's affordable multifamily housing. The best practices, based on research on efficiency programs for multifamily affordable housing (MFAH) nationwide, include the following:

- 1 Establish** the goal of capturing all cost-effective efficiency in MFAH.
- 2 Assure** that cost-effectiveness tests work for MFAH by accounting for non-energy benefits and applying cost-effectiveness tests to the entire portfolio of programs.
- 3 Develop** programs specifically targeted to MFAH buildings.
- 4 Structure** incentives for whole-building savings.

**7%** | PERCENTAGE OF PENNSYLVANIA HOUSING STOCK THAT IS AFFORDABLE MULTIFAMILY

**370,000** | UNITS OF AFFORDABLE MULTIFAMILY HOUSING IN PENNSYLVANIA

## Benefits of Increased Energy Efficiency in Multifamily Buildings

Making affordable multifamily housing more energy efficient is a cost-effective way to reduce energy consumption, preserve housing affordability, reduce pollution, and create healthier and more comfortable living environments. Currently, more than 370,000 Pennsylvania households live in affordable multifamily buildings and these units represent 7 percent of Pennsylvania's housing stock.

### PENNSYLVANIA FAMILIES

Reduces the burden of energy bills for low-income Pennsylvania residents.

Creates healthier, more comfortable living environments that can reduce instances of illnesses like asthma, which can be a major cause of missed work and school.

Reduces the high energy demand that drives up energy prices, thereby helping to contain energy costs for all Pennsylvania residents.

### PENNSYLVANIA COMMUNITIES

Reduces operating and maintenance costs for owners of affordable multifamily properties, freeing up capital for preserving Pennsylvania's affordable housing stock.

Improves local economies by creating clean energy jobs and enables residents to redirect spending to other non-energy necessities.

### PENNSYLVANIA UTILITIES

Helps utilities reduce energy demand and meet their clean energy goals.

Reduces bill-payment issues and related costs to utilities by lowering the energy bills of low-income customers.

Enables utilities to provide better, more reliable services by reducing stress on the grid, especially in energy-constrained areas.

### ABOUT THE ENERGY EFFICIENCY FOR ALL PROJECT

The mission of the Energy Efficiency for All (EEFA) project is to bring together the energy and housing sectors to tap the benefits of energy efficiency for millions of Americans living on limited incomes. We work with a range of partners in 12 states to promote effective utility energy efficiency programs for affordable building owners and healthy and affordable housing for residents. We blend expertise in affordable housing, energy efficiency, building ownership, and utility engagement. We work to support local groups by providing tools and resources that can help them increase energy efficiency opportunities for underserved tenants in their states. Local partners include ACTION-Housing, Keystone Energy Efficiency Alliance, and Pennsylvania Utility Law Project.

This project was made possible with funding from The JPB Foundation.
